2) `int[] quantities = new int[20];`

3) `double[] heights = {1.65, 2.15, 4.95}`

4) `for (int element : grades) {
 System.out.println(element);
}`

6) Passing a single element of the array only passes a single data value to the method, whereas passing an array passes all of the data in it.

7) When there are too many elements but we only need to access a small part of it, we use offset indexes to skip past the unnecessary elements.
